

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A cooling system for a work machine, the cooling system comprising:

a cooling package comprising a heat exchanger unit and a cooling fan;

an upper cover disposed above the cooling package;

a side cover disposed at one side of the upper cover and facing the cooling package;

upper air intake holes that are formed in the upper cover so as to open to a space between the side cover and the cooling package;

side air intake holes formed in an upper part of the side cover, at a location adjacent to the upper cover;

a swing shaft disposed between the upper air intake holes and the side air intake holes; and

a sound insulating/flow regulating plate, freely swingably supported by the swing shaft, and

that is capable of: moving between the upper air intake holes and the side air intake holes; blocking sound generated inside the work machine; and regulating flows of air introduced from the upper air intake holes and the side air intake holes.

2. (Cancelled)

3. (Currently Amended) The cooling system for a work machine as claimed in claim 1, wherein the cooling system further comprises:

hinges for attaching a base edge of the sound insulating/flow regulating plate to an underside of the upper cover; and

a ~~locking means~~ lock for securing a distal edge of the sound insulating/flow regulating plate to the underside of the upper cover when the sound insulating/flow regulating plate is in a folded state.

4. (Original) The cooling system for a work machine as claimed in claim 1, wherein:
the cooling system further comprises a plurality of sound insulating/flow regulating plates.

5. (Original) The cooling system for a work machine as claimed in claim 1, wherein:
the side cover is a side door that can be opened outwards and back; and
the sound insulating/flow regulating plate is attached to the side door.

6. (Original) The cooling system for a work machine as claimed in claim 1, wherein
the cooling system further comprises:
an actuator for operating the sound insulating/flow regulating plate;
temperature sensors for detecting temperature data of the cooling package; and
a control means for controlling an angle of the sound insulating/flow regulating plate by
controlling the actuator based on temperature data from the temperature sensors.

7. (Original) The cooling system for a work machine as claimed in claim 1, wherein:
the heat exchanger unit of the cooling package comprises a plurality of devices selected
from the group consisting of a heat exchanger of a radiator serving to cool cooling water for an
engine, a heat exchanger of an oil cooler serving to cool hydraulic fluid in a hydraulic circuit, a
condenser of an air conditioner circuit, and a heat exchanger of an aftercooler serving to cool engine
intake air compressed by a turbo supercharger; and
the sound insulating/flow regulating plate is adapted so that a position of the sound
insulating/flow regulating plate is adjustable to accommodate a combination structure of the
selected devices and the cooling fan.

8. (Currently Amended) The cooling system for a work machine as claimed in claim 2,
wherein the cooling system further comprises:
hinges for attaching a base edge of the sound insulating/flow regulating plate to an underside
of the upper cover; and

a ~~locking means~~ for securing a distal edge of the sound insulating/flow regulating plate to the underside of the upper cover when the sound insulating/flow regulating plate is in a folded state.

9. (Original) The cooling system for a work machine as claimed in claim 2, wherein: the cooling system further comprises a plurality of sound insulating/flow regulating plates.

10. (Original) The cooling system for a work machine as claimed in claim 3, wherein: the cooling system further comprises a plurality of sound insulating/flow regulating plates.

11. (Original) The cooling system for a work machine as claimed in claim 2, wherein: the side cover is a side door that can be opened outwards and back; and the sound insulating/flow regulating plate is attached to the side door.

12. (Currently Amended) The cooling system for a work machine as claimed in claim 2, wherein the cooling system further comprises:

an actuator for operating the sound insulating/flow regulating plate;

temperature sensors for detecting temperatures of the cooling package; and

a ~~control means~~ controller ~~for~~-controlling an angle of the sound insulating/flow regulating plate by controlling the actuator based on temperature data from the temperature sensors.

13. (Currently Amended) The cooling system for a work machine as claimed in claim 3, wherein the cooling system further comprises:

an actuator for operating the sound insulating/flow regulating plate;

temperature sensors for detecting temperatures of the cooling package; and

a ~~control means~~ controller ~~for~~-controlling an angle of the sound insulating/flow regulating plate by controlling the actuator based on temperature data from the temperature sensors.

14. (Currently Amended) The cooling system for a work machine as claimed in claim 4, wherein the cooling system further comprises:

an actuator for operating the sound insulating/flow regulating plates;
temperature sensors for detecting temperatures of the cooling package; and
a ~~control means~~ controller ~~for~~-controlling angles of the sound insulating/flow regulating plates by controlling the actuator based on temperature data from the temperature sensors.

15. (Currently Amended) The cooling system for a work machine as claimed in claim 5, wherein the cooling system further comprises:

an actuator for operating the sound insulating/flow regulating plate;
temperature sensors for detecting temperatures of the cooling package; and
a ~~control means~~ controller ~~for~~-controlling an angle of the sound insulating/flow regulating plate by controlling the actuator based on temperature data from the temperature sensors.

16. (Original) The cooling system for a work machine as claimed in claim 2, wherein:
the heat exchanger unit of the cooling package comprises a plurality of devices selected from the group consisting of a heat exchanger of a radiator serving to cool cooling water for an engine, a heat exchanger of an oil cooler serving to cool hydraulic fluid in a hydraulic circuit, a condenser of an air conditioner circuit, and a heat exchanger of an aftercooler serving to cool engine intake air compressed by a turbo supercharger; and

the sound insulating/flow regulating plate is adapted so that a position of the sound insulating/flow regulating plate is adjustable to accommodate a combination structure of the selected devices and the cooling fan.

17. (Original) The cooling system for a work machine as claimed in claim 3, wherein:
the heat exchanger unit of the cooling package comprises a plurality of devices selected from the group consisting of a heat exchanger of a radiator serving to cool cooling water for an engine, a heat exchanger of an oil cooler serving to cool hydraulic fluid in a hydraulic circuit, a condenser of an air conditioner circuit, and a heat exchanger of an aftercooler serving to cool engine intake air compressed by a turbo supercharger; and

the sound insulating/flow regulating plate is adapted so that a position of the sound insulating/flow regulating plate is adjustable to accommodate a combination structure of the selected devices and the cooling fan.

18. (Original) The cooling system for a work machine as claimed in claim 4, wherein:

the heat exchanger unit of the cooling package comprises a plurality of devices selected from the group consisting of a heat exchanger of a radiator serving to cool cooling water for an engine, a heat exchanger of an oil cooler serving to cool hydraulic fluid in a hydraulic circuit, a condenser of an air conditioner circuit, and a heat exchanger of an aftercooler serving to cool engine intake air compressed by a turbo supercharger; and

the sound insulating/flow regulating plates are adapted so that positions of the sound insulating/flow regulating plates are adjustable to accommodate a combination structure of the selected devices and the cooling fan.

19. (Original) The cooling system for a work machine as claimed in claim 5, wherein:

the heat exchanger unit of the cooling package comprises a plurality of devices selected from the group consisting of a heat exchanger of a radiator serving to cool cooling water for an engine, a heat exchanger of an oil cooler serving to cool hydraulic fluid in a hydraulic circuit, a condenser of an air conditioner circuit, and a heat exchanger of an aftercooler serving to cool engine intake air compressed by a turbo supercharger; and

the sound insulating/flow regulating plate is adapted so that a position of the sound insulating/flow regulating plate is adjustable to accommodate a combination structure of the selected devices and the cooling fan.

20. (Original) The cooling system for a work machine as claimed in claim 6, wherein:

the heat exchanger unit of the cooling package comprises a plurality of devices selected from the group consisting of a heat exchanger of a radiator serving to cool cooling water for an engine, a heat exchanger of an oil cooler serving to cool hydraulic fluid in a hydraulic circuit, a

condenser of an air conditioner circuit, and a heat exchanger of an aftercooler serving to cool engine intake air compressed by a turbo supercharger;

and the sound insulating/flow regulating plate is adapted so that a position of the sound insulating/flow regulating plate is adjustable to accommodate a combination structure of the selected devices and the cooling fan.
